IDENTIFIERS	*ACT Assessment; *Scholastic Assessment Tests; Texas

ABSTRACT

Results for 1995-96 graduating seniors in Texas are reported from the College Board's Scholastic Assessment Test (SAT) I: Reasoning Test and from the American College Testing, Inc. (Enhanced) ACT Assessment. Texas statewide, district, and campus results are displayed along with aggregate results from the United States and other states. Included also are selected test score trends and scores among students groups and among selected groupings of Texas regular and special public school districts as defined by the Texas Education Agency. The report also contains state, campus, district, and various district grouping summaries of the combined SAT I and ACT results, as defined within the Texas Academic Excellence Indicator System. In 1996, the Texas mean SAT I score of 995 was 18 points below the national mean of 1,013. ACT Texas versus national score trends mirrored those for the SAT. Texas students have less academic preparation than students nationally, but percentages of students completing 20 or more credits improved from 23 per cent in 1991 to 28 per cent in 1996. Appendixes contain tables of scores by ethnicity and by district and campus. (Contains 11 tables, 2 figures, and 39 references.) (SLD)

RESULTS OF COLLEGE ADMISSIONS TESTING IN TEXAS FOR 1995-96 GRADUATING SENIORS

RESEARCH AND EVALUATION DIVISION
TEXAS EDUCATION AGENCY
1701 NORTH CONGRESS AVENUE
AUSTIN, TEXAS 78701-1494
AUGUST 1997

PREFACE

Since 1989 the Texas Education Agency has reported selected results of college admissions tests for graduating seniors. In this ninth annual report, results are presented from the College Board's SAT I: Reasoning Test (formerly the Scholastic Aptitude Test, or SAT) and the ACT, Inc., (Enhanced) ACT Assessment for 1995-96 graduating seniors.

Since the fall of 1990, SAT/SAT I and ACT score data have been included in Texas' Academic Excellence Indicator System (AEIS). The AEIS was mandated in summer 1990 Texas legislation (Senate Bill 1) to establish a system of school academic performance accountability to local communities and school boards and to state education and legislative officials. Additional legislation passed in the summer of 1991 (House Bill 2885) also mandated the use of SAT and ACT data along with other criteria in the determination of Texas Successful Schools Award System (TSSAS) awards and recognition in the 1991-92 through 1992-93 biennium. Use of SAT and ACT data for accountability purposes continued in the past (1993-94 through 1994-95) and current (1995-96 through 1996-97) biennia. Note that neither AEIS nor TSSAS has employed the rank ordering of campuses or districts based on SAT/SAT I or ACT scores alone.

ACKNOWLEDGMENTS

This report was prepared by the Texas Education Agency's Research and Evaluation Division in an effort to promote understanding of the college admissions test scores of graduating seniors and to suggest areas for school-level educational attention.

Appreciation is expressed for the capable work done by ACT, Inc., staff (ACT Assessment data) and Educational Testing Service staff (College Board's SAT I: Reasoning Test score data) in providing the necessary college admissions test score data for this report. In addition, staff in the Austin, Texas regional offices of both ACT, Inc., and the College Board have been extremely helpful over the years in facilitating TEA's access to these test score data.

This report was produced with assistance from Stacy Buffington and Edward Tasch of the Office of Policy Planning and Research, Performance Reporting Division.

OVERVIEW

Results for 1995-96 graduating seniors are reported from the College Board's SAT I: Reasoning Test and from the ACT, Inc., (Enhanced) ACT Assessment. *(The SAT I, a revised but comparable test, replaced the original Scholastic Aptitude Test [SAT] effective March 1994, and the revised ACT Assessment replaced the original ACT effective October 1989.)* In this report, Texas statewide, district, and campus results are displayed along with aggregate results of the nation and other states. Included also are selected test score trends and scores among student groups and among selected groupings of Texas regular and special public school districts as defined by the Texas Education Agency (TEA). The report also contains state, campus, district, and various district grouping summaries of the combined SAT I and ACT results, as defined within Texas' Academic Excellence Indicator System (AEIS) (TEA, in press-b). Report purposes are to promote understanding of the diversity existing among tested graduates and to suggest areas for educational action in the schools.

1996 SAT I AND ACT RESULTS IN REVIEW

A brief review of 1996 SAT I and ACT results is provided to help reinforce the targeting of improvement efforts in areas under the most direct control of schools—that is, student access to educational opportunities and testing participation. Beginning in 1995-96, SAT I results are reported on the recentered score scale; similarly, ACT results have been reported on the (Enhanced) ACT score scale since 1989-90. Thus, all 1996 and prior years' score results in this report are reported on the respective recentered SAT I and (Enhanced) ACT score scales. For interpretation purposes, note that comparisons among aggregate scores from any educational entity, state, or group are best made when testing participation rates, student characteristics, and education and policy contexts are similar. Highlights below focus on differences between/among Texas and the nation and other states, Texas school districts, various types of students, and students within schools.

- The last decade showed some recovery over the previous decade's decline in both Texas and national SAT/SAT I averages, with relatively more improvement in Texas within the last ten years. On the *recentered* scale in 1996, this relatively larger ten-year gain in Texas still held true even though Texas' mean SAT I Total score at **995** dipped slightly to 18 points below the nation's mean of **1013**. In 1995, Texas at **996** was 14 points below the nation at **1010**.

- ACT Texas versus national score trends mirrored SAT/SAT I score trends over the same period. The 1996 Texas average ACT Composite score of **20.2** compared to a national average of **20.9**—both up 0.1 point from the previous year.

- Although Texas SAT I-tested students had less academic preparation than students nationally, percentages completing 20 or more credits improved from 23 percent in 1991 to 28 percent (versus 41% nationally) in 1996. 1996 SAT I- and ACT-tested African American and Hispanic students had fewer academic credits than White and Asian American students, and Texas SAT I-tested females completed fewer physics courses than males. Texas SAT I-tested males more often than females reported plans for receiving college advanced placement or credit in chemistry, computer science, and physics.

- Even with growth in numbers and percentages of ethnic minority (except for Hispanic) students tested in recent years, most Texas minority ACT scores have shown some improvement since 1992. Although increasing percentages of African American and Hispanic students completed core academic credits over the past few years, scores of White and Asian American students still tended to be higher. Almost all Texas SAT/SAT I scores across ethnic groups continued improving more than scores nationally from 1992-1996.

- A relatively higher percentage of 1996 Texas public school graduates took the SAT I (50.9%) compared to the ACT (33.3%); altogether, 64.7 percent (down 0.1% from the past two years) took the SAT I and/or the ACT, based on unduplicated student counts. These percentages still were below the highest 1996 state percentage reported for SAT I-tested graduates in Massachusetts (80%) and for ACT-tested graduates in Tennessee and North Dakota (77%).

- Generally consistent with the separate Texas SAT/SAT I and ACT mean score results, the percentage (6.8%) of African American students scoring at or above the SAT/SAT I and/or ACT criterion has improved by 0.3 percent since 1991, while Hispanics slipped by 0.2 percent to 10.1 percent in 1996. The percentages of White (34.6%) and Asian American (42.7%) students scoring at or above criterion were still higher than those of other ethnic groups. Percentages meeting criterion for all ethnic groups were highest in 1994-95. Relative to criterion, male students still out-performed female students, although the gap between males and females continues to narrow.

- In general, states with lower percentages of SAT I-tested seniors tended to show higher state mean SAT I scores, and vice versa. A similar relationship between state mean ACT scores and percentages of seniors tested was extremely weak. In Texas, the simple relationship between district average SAT I or ACT scores and district percentage of seniors tested was negligible.

- Considering 1996 SAT I and ACT results together for 969 public school districts with graduating seniors or test score data indicated that the vast majority (878) of districts participated in both SAT I and ACT testing; only four districts showed no testing participation. A total of 908 districts had five or more graduates taking the SAT I and/or ACT.

- Consistent with previous findings, SAT I Total and ACT Composite scores tended to go up as the values of certain demographic variables rose, including district wealth, student family income, district percentage of non-low-income students, district average teacher salary (comparing lower and higher brackets), and district percentage of teachers with advanced degrees.

- In general, SAT I and ACT average scores also increased as the values of selected educational variables went up, including district average percentage of students passing all sections of the 1995-96 TAAS test, prior year district percentages meeting the SAT I and/or ACT criterion score, student letter grade average, and student number of academic courses completed.

- Extensive analysis of a previous year's data helped underscore key student, campus, and district characteristics related to 1994 SAT scores achieved by students within schools and districts. For instance, *district average Math and Total scores* tended to go up as *district percentages* of students passing TAAS exit-level exams went up, while *campus average Verbal, Math, and Total scores* tended to increase with increasing *campus percentages* of students passing TAAS exit-level exams, Advanced Placement (AP) examinees scoring 3-5, and students taking AP exam(s). For *students within schools and districts*, SAT Verbal and Total scores were positively linked with student plans for college English placement/credit, student self-reported grade-point average, and student number of both AP and non-AP advanced courses (as defined by TEA) completed. SAT Math scores were positively related to student high school rank and student number of advanced courses completed.

Thus, the most general suggestion to the educational community for improving students' SAT I and ACT scores, or academic preparation for college, is to focus on improving the academic preparation of all students while also encouraging testing participation. That is, schools and communities should work on increasing educational inputs rather than faulting school or student demographics, which are less subject to the direct influence of schools.

INTERPRETATIVE ISSUES

For individual students, college admissions tests are measures of developed academic abilities that are best used in conjunction with other measures, such as high school grade-point average and courses taken, to predict academic performance in college. When examined over time, aggregate changes in these test scores may indicate how well educational institutions are preparing students for college. However, it is always inappropriate to make decisions about individuals, groups of individuals, or educational institutions based on SAT/SAT I or ACT test scores alone. Because not all graduating seniors take the SAT I or ACT, comparisons among educational entities are best made when the percentage of students tested, student characteristics, and education and policy context are similar (also see College Entrance Examination Board, 1988, and the ACT Program, 1996c). Ultimately, the critical outcome is increasing student academic preparedness as reflected by increased scores without reducing students' participation (percentages tested) in or access to the testing.

SCORE SCALES

Verbal and Math scores from the SAT I range from 200 to 800 and sum to the SAT I Total score ranging from 400 to 1600. All previous years' SAT/SAT I and 1995-96 SAT I scores in this report are reported on the recentered scale. However, SAT/SAT I results included in previous TEA reports (e.g., TEA, 1997b) are reported on the original scale. Recentering reset the average or midpoint of the score distributions at approximately 500 on both SAT I Verbal and Math scales. ***Thus, 1995-96 SAT I scores in this report, because they are based on the recentered scale, cannot be directly compared to scores reported in previous years on the original scale***. Equivalence tables are available from the College Board for converting both individual and average scores from the original to recentered scale, and vice versa.

Since October 1989, the (Enhanced) ACT Assessment has consisted of English, Math, Reading, and Science Reasoning test scores with a standard score range of 1 to 36; the Composite is the average of these four scores. ***Note that (Enhanced) ACT scores beginning in 1989-90 and original ACT scores reported on a different scale before are noncomparable***.

ACCESS TO TESTING

Fees and fee waivers. Through summer 1997, basic test fees are $21.50 for the SAT I and $19 for the ACT, which include the costs of test registration and sending score reports to various institutions (ACT, 1996d; CEEB, 1996c).

For the SAT I, an individual may request that score reports be sent to up to four colleges and scholarship programs. Scores for the ACT may be sent to up to three colleges and scholarship programs. Beginning in fall 1997, the SAT basic test fee will increase to $22.50 (personal communication with M. Salmon, College Board, Southwestern Regional Office, June 12, 1997), and the ACT fee will rise to $20, which will allow ACT reports to be sent to as many as four colleges and scholarship programs (personal communication with F. Turner, ACT, Inc., Southwest Region, June 13, 1997).

Test fee waivers from the College Board and ACT for the SAT I and ACT are available to junior and senior high school students based on economic need. Criteria for determining a student's eligibility include: family income; whether the student's family receives public assistance; whether the student lives in a foster home; and whether the student participates in a program for the economically disadvantaged, such as Upward Bound. For the SAT I, a student may receive a maximum of two fee waivers, which may be used in either the junior or senior year (personal communication with J. Lockhart, College Board, Southwestern Regional Office, December 10, 1996). For the ACT, a student may receive only one fee waiver, which may be used in either the junior or senior year. However, in many Texas schools and districts, availability of local funding and local criteria determine the extent to which testing fees for additional students and tests may be covered.

Services for students with disabilities. Both the College Board and ACT, Inc., provide special services for students with disabilities (ACT, 1996e; CEEB and ETS, 1996). To qualify, a student must have a disability that necessitates testing accommodations, as supported by documentation on file at school (e.g., an individual education plan, a 504 Plan, or a professional evaluation). The student also must be currently receiving special accommodations for school-based tests; however, an exception may be allowed based on additional documentation provided by an appropriate school staff member or a qualified professional. Texas State Board of Education rules relating to testing accommodations for school-based tests are specified in 19 TAC §101.3.

Various accommodations are available depending on the nature of the disability—for example, a magnifying device, typewriter or computer, Braille device, sign language for verbal instructions, and extra testing time. Depending on the type and extent needed, special testing accommodations are provided through the SAT Program at national test centers or students' schools (or other ETS-approved sites) (CEEB and ETS, 1997). Student score reports are marked as "Nonstandard Administration" for the SAT I or as "Special" for the ACT. Neither score report indicates the reason for special testing accommodations.

SPECIFIC USES OF SCORE RESULTS IN TEXAS

Results from SAT/SAT I and ACT college admissions tests are used for a variety of specific purposes in Texas. Some of these uses are specified in Texas statute, while other uses are based on state-level rule or policy or the varying policies of the state's colleges and universities.

College admission requirements. Historically, each institution of higher education in Texas has established its own criteria for admissions, as is the case in many states. Consistent with the recommendations of the College Board (CEEB and ETS, 1996), most senior, or four-year, colleges and universities have taken into consideration some combination of a student's college admission test scores (SAT I and/or ACT) and school achievement record (e.g., courses taken, grade-point average, class rank, etc.) (CEEB, 1995c). The score standards required for the SAT I and ACT vary significantly, based on the selectivity of the institution, but often are tied inversely to the student's class rank in high school—that is, the higher the class rank, the lower the test score required, and vice versa. Other institutions, however, including many junior and community colleges, maintain open admission policies under which any person with a high school diploma or its equivalent may be accepted.

Beginning with fall 1998 first-time freshman admissions, Texas public higher education institutions will be required to admit applicants who graduate (within one of the two preceding school years) with a grade-point average in the top 10 percent of their class (H.B. 588, 75th Legislature). After granting such general admission, Texas higher education institutions may determine whether or not admitted students need additional preparation for college-level work or need to participate in a retention program. The Texas legislation also allows institutions to determine locally whether or not additional automatic admissions will be adopted—that is, students graduating with grade-point averages in the top 25 percent of their classes. Otherwise, for other applicants, institutions shall consider all, any, or a combination of socioeconomic indicators and other factors (e.g., academic record, performance on standardized test, etc.) specified in Texas statute in making admissions decisions, except for those institutions with open enrollment policies. Thus, despite recently passed Texas legislation, admissions policies can still vary substantially among Texas public and any other higher education institutions.

Exemption from other testing. In response to public concerns that a growing number of high school graduates lacked the academic skills needed to perform effectively in college, the Texas Legislature in 1987 established a system of testing and remediation called the Texas Academic Skills Program (TASP) (TEC §51.306, 1988). Under the program, each student (with certain exceptions) who enters a public institution of higher education must take a diagnostic test of basic reading, writing, and mathematics skills. The TASP Test cannot be used as a condition of admission to the institution, but must be taken before the student completes nine semester credit hours of coursework. Beginning in fall 1998, students must be tested ***before*** enrolling in college-level courses, except under certain conditions (S.B. 148, 75th Legislature). Colleges and universities are then responsible for providing remediation to students who fail any part of the test.

In 1993, the legislature created special exemptions from the TASP Test based on SAT, ACT, and exit-level Texas Assessment of Academic Skills (TAAS) scores (TEC §51.306, 1994). The 74th Legislature extended the TASP exemptions in 1995 by requiring the Texas Higher Education Coordinating Board (THECB) to lower the target scores used to determine eligibility for the exemptions. Currently, to qualify for an exemption based on the ACT, a student must receive an ACT Composite score of 26 or higher, with ACT English and Math scores of 22 or higher. For SAT I tests taken in April 1995 or after (recentered score scale), a student must receive an SAT I Total (Verbal + Math) score of 1180 or higher, with scores on Verbal and Math sections of 550 or higher. For SAT/SAT I tests taken before April 1995 (original score scale), the SAT/SAT I Total score must be 1090 or higher, with a Verbal score of 470 or higher and a Math score of 530 or higher. Including these exemptions, THECB guidelines for TASP exemptions based on the exit-level TAAS are also specified in 19 TAC §5.313.

Campus- and district-level performance accountability reporting. In 1989, the Texas Legislature created the Academic Excellence Indicator System (AEIS) and directed the State Board of Education (SBOE) to adopt and report a set of campus- and district-level indicators of student performance that included, among others, performance on the SAT and ACT (TEC §21.7531, 1990). The SAT/ACT indicator adopted by the board in November 1990 encompasses three measures for reporting test results (SBOE, 1990). The first was the percentage of graduates who scored at or above the criterion score on either test (24 on the ACT Composite and previously an SAT I Total score of 1000 on the original scale). Effective with this fall's 1996-97 AEIS report, a redefined measure beginning with the reporting of 1995-96 SAT I and ACT scores has been approved by the commissioner of education—that is, the percentage of *examinees* (rather than graduates) scoring at or above the criterion on either test (still an ACT Composite of 24 but now a recentered SAT I Total of 1110) (TEA, 1997a). The second measure is a participation rate, or the percentage of graduates who took either college admissions test. The third is the average score for each test (SAT I Total and ACT Composite). For purposes of year-to-year comparisons, this information is reported for the current (most recent year with available data) and previous year when comparable data are available.

Since 1994, when the AEIS indicators were first grouped into different categories for accountability purposes, the SAT/ACT indicator has been reported as an "additional" indicator (TEA, 1994, 1997a). Unlike "base" indicators, additional indicators are not used to determine campus or district accountability ratings. They are, however, used to acknowledge high levels of campus or district performance. Any district rated *Academically Acceptable* or higher and any campus rated *Acceptable* or higher is eligible for acknowledgment on additional indicators. Effective with 1996-97 accountability system acknowledgment ratings, only one level of acknowledgment, *Acknowledged*, along with new standards, will be used (TEA, 1997a). For *Acknowledged* campus or district performance, 70 percent or more of the graduates must take either the ACT or SAT/SAT I, and 50 percent or more of examinees must score at or above the criterion score for either test. Standards must be met for each student group (African American, Hispanic, and White) at a campus or district, as well as for all students combined. Previously, campus and district performance was acknowledged at two separate *Exemplary* and *Recognized* levels. For previous *Exemplary* acknowledgment, 70 percent or more of the graduates were required to take either the ACT or SAT/SAT I (still required for the new *Acknowledged* level), and 35 percent or more of graduates must have scored at or above the criterion score for either test. For previous *Recognized* acknowledgment, the standards were 55 percent and 10 percent, respectively. Further detail on current college admissions indicator definitions and acknowledgment standards can be found in TEA's recently published accountability manual (TEA, 1997a).

School- and district-level awards and recognition. From 1989-90 through 1994-95, state appropriations were available for monetary awards to campuses with students demonstrating substantial gain in academic performance on indicators such as those in the AEIS. The first set of campus monetary awards, made in fall 1990 by the Governor's Educational Excellence Awards Committee (TEC §§34.001 - 34.009, 1990), was based on SAT and ACT performance indicators, among others, for high schools. (Of course, indicators for non-secondary schools excluded SAT and ACT measures.) Afterwards, the program was transferred to TEA as the Texas Successful Schools Award System, or TSSAS (TEC §§34.001 - 34.009, 1992). During the second year of TSSAS (1992-93), SAT and ACT indicators were once again considered along with other AEIS indicators for monetary awards for high school campus performance gain. During the third year of TSSAS (1993-94), campuses received non-monetary TSSAS acknowledgment for meeting AEIS *Exemplary* and *Recognized* standards for SAT and ACT indicator performance, which was in alignment with additional acknowledgment status given this indicator under the AEIS. Since then, neither monetary nor non-monetary awards have been made to campuses for SAT and ACT performance under TSSAS. Though TSSAS was retained in statute for the current biennium (TEC §§39.091 - 39.096), no appropriations were made to fund the awards. Recent legislation continues TSSAS through the next biennium, and this time appropriations have been made for funding awards in the next biennium (Rider 54 of the Appropriations Act, Article III—Education, 75th Legislature).

DATA SOURCES

Some data in this report originate from summary reports of state and national test score profiles of public and non-public high school graduates released annually by the College Board (The College Entrance Examination Board [CEEB], 1995a, 1995b, 1996b, 1996c) and by ACT, Inc. (The American College Testing Program, 1995a, 1995b, 1996a, 1996b; ACT, Southwest Region, 1995, 1996) in late summer. Texas' public school student test score data were provided directly to TEA by the two testing programs. Additional TEA district and campus characteristics data were examined in conjunction with the most recent scores from 1995-96 seniors (through March 1996 for the SAT I).

TEXAS AND NATIONAL TRENDS

The Texas mean SAT I Total score (sum of Math and Verbal scores) on the *recentered* scale slipped slightly from **996** in 1995 to **995** in 1996, while the national mean score rose from **1010** to **1013**, widening the gap between Texas and the nation from 14 to 18 points. During the past 26 years, the maximum gap of 31 points below the national mean (on the original scale) occurred in 1984 and in 1987. Over the same period, the mean ACT Composite score gap between Texas (20.2 in 1996) and the nation (20.9 in 1996) was the least ever in 1994, widening by 0.1 point in 1995 but holding steady in 1996. One reason often given for score gaps concerns the overall academic preparedness among groups of test takers, which sometimes relate to differences in the proportions of traditionally low-scoring, under-prepared examinees. Repeatedly, findings reported by the two testing programs and researchers have shown the tendency for test scores to increase as the amount of academic coursework goes up.

BEST COPY AVAILABLE

In general, Texas SAT/SAT I-tested students have completed fewer academic courses than students nationally (28 versus 41 percent, respectively, at the 20+ courses level in 1996), supporting the notion of differential academic preparedness. However, the better prepared Texas students (at the 17+ courses level in 1996) have tended to score just as well or higher than students nationally. Despite the fact that the percentage of SAT/SAT I-tested ethnic minority students has risen faster in Texas than in the nation, almost all SAT/SAT I scores across Texas student ethnic groups showed greater improvement overall than scores nationally since 1992. On the ACT, most Texas minority student scores have continued improving since 1992, and increasing percentages of minority students completed core academic coursework, as defined by ACT. Typically, Texas SAT/SAT I and ACT score results have shown African American and Hispanic students completing relatively fewer academic courses when compared to White and Asian American students—one possible reason for mean score discrepancies among ethnic groups.

College Board reports also indicate that the generally higher scores achieved by men relative to women on the SAT/SAT I may relate to the rigor of academic courses they take. For instance, disproportionately fewer women have tended to enroll in natural sciences courses, such as physics, and in previous years in mathematics courses, such as calculus. Since 1994, Texas ACT Composite scores for women have exceeded scores for men by 0.1 point, and the higher scores achieved by women on the ACT English test offset the higher scores obtained by men on the ACT Math test. Although 1991 through 1996 Texas ACT Composite scores were virtually the same for males and females, the Math, English, Reading, and Science Reasoning score differences deserve continued scrutiny. For further detail on some of the 1995-96 Texas versus national SAT I results discussed above, see Table 1 on page 7; for similar 1995-96 ACT results, see Table 2 on page 8. For specific SAT/SAT I and ACT mean score trends by ethnicity, see Tables 1-A and 2-A in Appendix A; for SAT/SAT I and ACT trends in examinee numbers and percentages by ethnicity, see Table 3-A.

AEIS INDICATORS OF TEXAS COLLEGE ADMISSIONS TEST RESULTS

As mentioned previously, Texas' Academic Excellence Indicator System (AEIS) includes measures of combined but unduplicated percentages of graduating seniors tested and percentages of examinees meeting a specific score criterion on either the SAT I (SAT I Total: at or above 1110) or the ACT (ACT Composite: at or above 24). In other words, even if a student took both tests, each individual's participation or criterion score achievement is counted only once in calculating these percentages. Before 1990-91, TEA did not receive the type of data from the two testing programs that allowed calculation of these values.

Table 3 displays the statewide averages for percentages of SAT I- and/or ACT-tested 1995-96 public school seniors and the percentages of examinees meeting the criterion score on either test. (Note that Table 1 contained these percentages for the SAT I; Table 2, for the ACT.) Females participated more often in SAT I and/or ACT testing than males, and the female participation rate has grown more rapidly than the rate for males since 1990-91 (see Figure 1). In contrast, males met the criterion for either test more often than females, but this difference between males and females has lessened over the last six years (see Figure 2 on page 12). This was consistent with state and national results for both the SAT I and ACT separately. Score gaps among ethnic groups were apparent from inspection of the differences in percentages meeting or exceeding criterion scores and also were consistent with separate SAT I and ACT results.

TABLE 3

Numbers* and Percentages* of SAT I- and/or ACT-Tested Graduates and Examinees At or Above Criterion** Score on Either Test (1995-96 Texas Public School Graduates)

Group	Number* Tested	Number* of Graduates	Percent* Tested	Number* At or Above Criterion**	Percent* At or Above Criterion**
All Groups	101,262	156,392	64.7	26,663	26.3

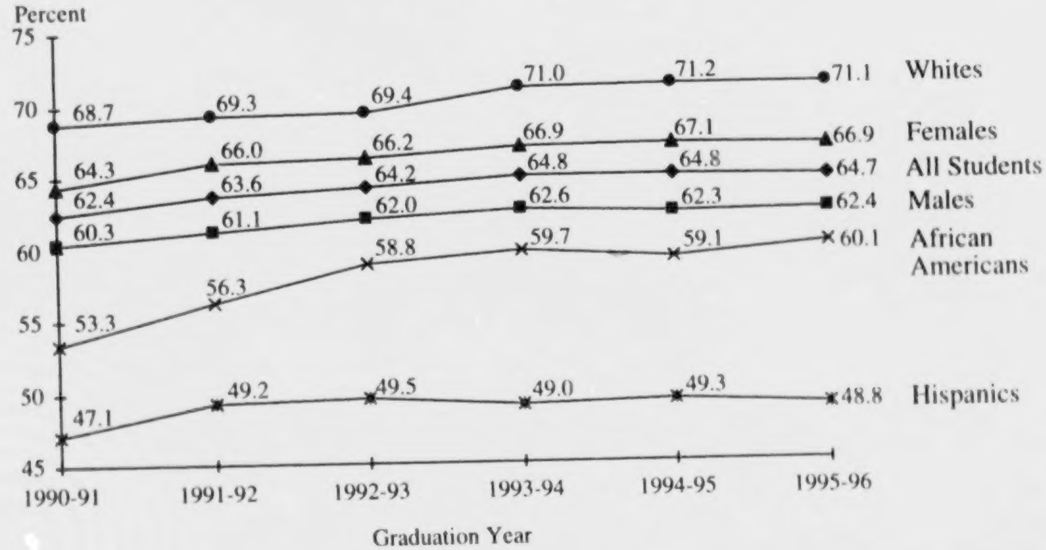
Native American	338	372	90.9	86	25.4
Asian American	4,552	5,239	86.9	1,945	42.7
Hispanic	22,195	45,489	48.8	2,232	10.1
White	61,910	87,111	71.1	21,391	34.6

Source of data in table: TEA, PEIMS, actual public school graduate numbers (excluding those in special education); TEA, Research and Evaluation Division, analysis of CEEB and ACT program data of Texas public high school graduates with percentages from analyses also reported in the Academic Excellence Indicator System (AEIS) (TEA, in press-a).

*Group numbers may not add to total for all groups because ethnic group for some students was not included or was not known.

** The AEIS college admissions test criterion scores are an SAT I Total = 1110 and/or an ACT Composite = 24; in previous years, the SAT/SAT I Total criterion was 1000. Criterion score percentages are based on total *examinees* taking one or both tests, rather than on all non-special education graduates, as in previous TEA reports.

FIGURE 1
Trends in Percentages of SAT/SAT I- and/or ACT-Tested Graduates (1990-91 through 1995-96 Texas Public School Graduates)



Source of data in figure: TEA, PEIMS, actual public school graduate numbers; TEA, Research and Evaluation Division, analysis of CEEB and ACT program data of Texas public high school graduates with percentages from analyses also reported in the Academic Excellence Indicator System (AEIS) (TEA, 1993, 1994a, 1995, 1996, in press-a).

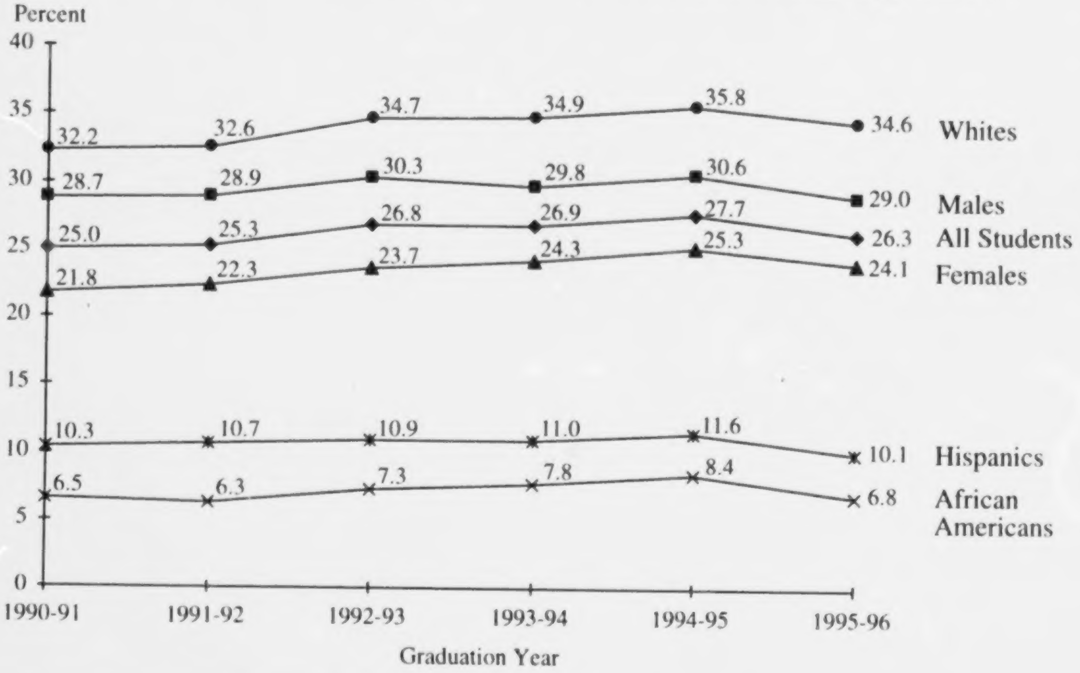
TEXAS AND THE OTHER STATES

Table 4 on page 13 presents results of the SAT I testing program for the 50 states for 1995-96 (see College Entrance Examination Board, 1996a, for mean Verbal and Math scores). Average scores on the Verbal portion of the test ranged from 480 to 596, and on the Math portion from 474 to 600. The percentages of students taking the test ranged from 4 percent in Mississippi and Utah to 80 percent in Massachusetts. These figures were calculated by the College Board based on estimates of the total number of public and nonpublic school graduates in each state and in the nation. The total number of 1995-96 Texas graduates who took the test was 89,329; of these, 79,638 Texas public school graduates were tested (see Table 1 on page 7).

Table 4 also presents ACT results by state for 1995-96. Mean ACT composite scores ranged from 18.8 to 22.6, while percentages of seniors tested ranged from 1 percent in Rhode Island to 77 percent in Tennessee and North Dakota. Often, states with low percentages of ACT takers had high percentages of SAT I takers, and vice versa.

FIGURE 2

Trends in Percentages of SAT/SAT I and/or ACT Examinees At or Above Criterion* Score on Either Test (Examinees Indicating Texas Public School Graduation 1990-91 through 1995-96)



Source of data in figure: TEA, Research and Evaluation Division, analysis of CEEB and ACT program data of examinees indicating graduation from a Texas public high school during the years above. Criterion score percentages, previously based on all non-special education graduates in the Academic Excellence Indicator System (AEIS) (TEA, 1993, 1994, 1995, 1996), were recalculated based on total examinees taking one or both tests to be consistent with the new definition for reporting 1995-96 college admissions data under the 1997 AEIS (TEA, in press-b).

* Effective for 1995-96 scores, the AEIS college admissions test criterion scores are an SAT I Total = 1110 and/or an ACT Composite = 24; in prior years, the criterion for the SAT/SAT I Total score = 1000, while the ACT Composite criterion has remained the same.

Source of data in table: College Entrance Examination Board (CEEB) (1996c) for mean SAT I Verbal and Math scores, used to compute SAT I Total scores, and for percentages of SAT I-tested graduates; ACT (1996c) for mean ACT Composite scores and percentages of ACT-tested graduates.

Note: Above data include both public and private school graduates. Percentages of SAT I-tested and ACT-tested graduates are based on projected 1996 graduating senior enrollments developed by WICHE.

STATE AND DISTRICT PERCENTAGES OF SAT I- AND ACT-TESTED STUDENTS

As presented in previous years of this report, results indicated that higher 1996 mean SAT I scores by state were associated with lower percentages of graduating seniors taking the test. Reasons often given for this relationship are that primarily only the most academically able in the state take the test and/or that the majority of the state's colleges and universities historically prefer or require another admissions exam such as the ACT. In contrast, relatively low mean SAT I scores and high percentages tested in states such as Texas appear to occur because more students of varying academic backgrounds are tested, which lowers averages overall.

However, this relationship did not persist for school districts in Texas and for states when other factors were considered. For instance, when Texas was grouped with 23 other states with over 35 percent of SAT I-tested graduates, the relationship was much lower or barely in evidence. For the 50 states with ACT data in Table 4, there was only a slight correlation or tendency for state mean ACT Composite scores to decrease as the percentages of ACT-tested seniors went up. These correlational fluctuations underscore the inaccuracies inherent in making state or other types of simple group comparisons based on test scores alone, especially when the percentages tested, along with other educational and demographic factors of the state or group, are markedly dissimilar. For district mean data within Texas, negligible correlation existed between SAT I, as well as ACT, mean scores and percentages tested. Statewide, districts also varied greatly in patterns of SAT I versus ACT testing participation, as well as in percentages tested.

DISTRICTS AND CAMPUSES WITHIN TEXAS

Of the 969 public school districts (including 1,468 campuses) with either graduating seniors or test score data in 1995-96, 878 districts and 1,104 campuses had both SAT I and ACT test takers. There were 73 districts and 81 campuses with ACT-tested students only, 14 districts and 35 campuses with SAT I-tested students only, and 4 districts and 248 campuses showing neither SAT I nor ACT participation. Of the 965 districts and 1,219 campuses with SAT I and/or ACT participation, 383 districts and 436 campuses showed fewer than five graduates meeting the SAT I and/or ACT criterion score, 54 districts and 76 campuses had fewer than five graduates taking either test, and 3 districts and 21 campuses had no graduates according to TEA records. SAT I results for each district and campus are shown in Table 1-B in Appendix B; ACT results are shown in Table 2-B; combined ACT and SAT I results as defined under AEIS are in Table 3-B.

DISTRICT, CAMPUS, AND STUDENT CHARACTERISTICS DATA

GENERAL SCORE ASSOCIATIONS

Results described in the paragraph below are based on summaries of scores grouped by the 25 groupings of districts with similar characteristics shown in Table 4-B in Appendix B. The grouping characteristics are defined in the Glossary beginning on page 85. Other results described in the paragraph below but not shown in these tables concern summaries of scores grouped by student-level characteristics, which were obtained for the SAT I from the Student Descriptive Questionnaire (SDQ) and for the ACT from the Student Profile Section and High School Course/Grade Information portions of the Student Information booklet.

Many of the separate mean SAT I Total and ACT Composite score results and the 1996 combined SAT I and/or ACT examinee percentages meeting the score criterion (per AEIS) were consistent with most College Board and ACT published findings. For instance, increasing district wealth, increasing student family income, or decreasing percentages of low-income students within districts, corresponded with rising mean scores for data from the 1988 through 1996 school years. Other positive relationships and similarities existed between the college admissions testing data and the (a) district average percentage of students passing all sections of the 1995-96 Texas Assessment of Academic Skills (TAAS) test, (b) district percentages tested and percentages meeting the criterion on prior year SAT I and/or ACT scores, (c) district average teacher salaries (comparing higher versus lower salary levels), (d) district average percentage of teachers with advanced degrees, (e) student self-reported letter grade average, and (f) student self-reported number of academic courses completed. That is, mean scores went up as the values of each of these variables rose.

SOME SPECIFIC SCORE ASSOCIATIONS

Results in the last two paragraphs of this section were based on 1994 student SAT test score and SDQ data, student Advanced Placement (AP) examination data, and TEA Public Education Information Management System (PEIMS) student and campus data. These results are reported because the 1994 data had already been prepared for more extensive analysis.

Results from hierarchical linear modeling statistical analysis of 1994 Texas SAT scores (Hargrove & Mao, 1997) help underscore key student, campus, and district characteristics related to scores attained within and across campuses and districts, further clarifying results from a previous analysis of the same 1994 scores (Hargrove, Mao, & Barkanic, 1996). Across separate analyses of SAT Verbal, Math, and Total scores, a substantial amount (73%, 74%, and 73%, respectively) of mean score total variation between campuses was described consistently by key variables. That is, *campus mean Verbal, Math, and Total scores* in 1994 were positively and most consistently associated with *campus percentages* of students passing all TAAS exit-level exams, percentages of AP examinees scoring 3-5, and percentages of students taking AP exam(s), while *district mean Math and Total scores* were positively linked with *district percentages* passing all TAAS exit-level exams. *Campus mean scores* also tended to be relatively higher for: (a) schools with relatively lower percentages of limited-English proficient students (for Verbal scores only); (b) campuses with relatively higher percentages of White teachers (for Math scores only); (c) campuses with a relatively higher *diversity* of (i.e., defined as number of different) total AP and non-AP advanced courses completed (Math and Total scores) and AP exam(s) taken (Verbal scores only); and (d) campuses with a relatively lower *diversity* of AP courses completed (Verbal and Total scores). *District mean Verbal scores* also tended to be higher for *districts* with a relatively higher *diversity* of AP exam(s) taken and a relatively lower percentage of minority students. *(For a complete description of interpretative details, see Hargrove & Mao, 1997.)*

For *students within schools and districts,* SAT Verbal and Total scores generally rose as students reported having college English placement/credit plans and as self-reported grade-point average and number of TEA-defined advanced courses (AP and non-AP advanced courses) completed went up. SAT Math scores tended to go up as student rank in class and number of advanced courses completed increased.

CONSIDERATIONS FOR EDUCATIONAL ACTION IN THE SCHOOLS

A distinction should be made between demographic and educational variables related to test scores. This distinction is important because the education community should focus on the attributes that it can most directly influence. In other words, variables such as family income or parent level of education are not under the public school's practical domain of control.

In adhering to the distinction above, a number of approaches are suggested for educational action in the schools to improve students' academic preparation for college. These center on encouraging all students to take a greater number of academically challenging courses, increasing the array (number and diversity) of rigorous, challenging courses offered, and encouraging more participation in college admissions testing programs. Schools must ensure that the courses offered cover genuinely advanced material and are not simply labeled as advanced courses. For some districts, the most practical option for expanding the array of rigorous course offerings may depend on technology such as distance learning.

Encouraging students to take courses that focus primarily on preparation (coaching) for taking college admissions tests should be carefully considered. Only well-designed and well-executed supplemental courses focused on improving test-taking strategies, coupled with instruction that broadly addresses verbal or quantitative skills, are recommended for consideration, especially for students from traditionally low-scoring groups. Smyth's (1990) study of the effects of SAT coaching, which controlled for differences in students' initial scores and number of tests taken, found the average net gains attributed to coaching to be quite small. In summary, the educational goal in this context is to better prepare students academically for college, not simply to raise college admissions test scores.

Source of data in table: CEEB and ACT Assessment Program.

APPENDIX B

NOTES ABOUT TABLES IN APPENDIX B

RESULTS AND NOTES LISTED IN TABLES

The SAT I results listed for each district and campus in Table 1-B include average SAT I Verbal, Math, and Total scores of 1996 graduating seniors, number of graduating seniors with SAT I scores, total number of graduates, percent of graduates with scores, number and percent of SAT I-tested examinees with SAT I Total scores of 1110 or higher, and a "note" column for district- and campus-specific comments. Similarly, ACT results are listed by district and campus in Table 2-B, except that average ACT English, Math, Reading, Science Reasoning, and Composite scores are reported rather than SAT I scores. Next, Table 3-B shows by district and by campus the number and percentage of SAT I- and/or ACT-tested graduates and of examinees scoring at or above the criterion on either test, a "test note" column referencing specific tests, and "note" column in correspondence with Tables 1-B and 2-B. In all three tables, campus results are the same as district results for districts with only one senior high school.

More specifically, SAT I and ACT score data for districts and campuses are not listed in Tables 1-B through 3-B when the number of graduates with scores is less than five because of the instability of statistics based on such low numbers of scores. Campuses with fewer than five students tested are excluded from the tables. A "<5 tested" note is printed for districts with fewer than five students tested. This precaution also helps to ensure that single sets of scores cannot be identified or linked with any individual. In addition, districts and campuses with fewer than five students scoring at or above the criterion were given a "<5 high" comment; when it was possible for these score data to be arithmetically inferred from parallel score data from the district and its other campuses, further masking was employed (e.g., "<10 masked," "<20 masked," "<30 masked," "<40 masked," "<50 masked," "<100 masked," or "<200 masked"). Districts and campuses with no graduates tested received a "none tested" note, and those with no TEA-recorded graduates reflect "no grads/TEA," unless further masking was employed. The test note column in Table 3-B displays "SAT only" or "ACT only" when statistics were based on just one of the two tests; "neither" indicates neither test was taken by students.

Table 4-B presents results of the two testing programs when the district data are aggregated into 25 types of groupings of districts with similar characteristics as defined in the Glossary and by TEA's ANALYZE program. From these, results start with district enrollment groupings and end with groupings of the district percentage of teachers with an advanced degree. These groupings allow examination, by the various district characteristics, of the pattern of district average scores and percentages of students tested for each test separately and for percentages of SAT I- and/or ACT-tested graduates and percentages of examinees meeting the score criterion on either test, as defined within AEIS (TEA, in press-b).

SOURCES OF DATA FOR TABLES

Overall, data were obtained from the College Board on 85,442 public school graduates in 1996 who participated in the SAT Program's SAT I: Reasoning Test and/or SAT II: Subject Tests and from the American College Testing Program on 52,127 students taking the ACT. District and campus results showed a complete set of SAT I scores for 79,638 graduates and ACT scores for 52,103 graduates. Although the believed effect is small, some amount of inaccuracy may have resulted in using high school codes supplied by the testing programs to link students' scores to schools and districts (The College Board, Southwestern Regional Office, personal communication, June 15, 1989). In another small set of cases, student miscodings of one of the fields used for student matching may have resulted in more than one set of scores per student (The American College Testing Program, personal communication, February 28, 1990). Such discrepancies may have caused slight imprecision in estimating percentages of graduates tested. The actual computation of percentages of graduates tested included the total number of non-special education graduating seniors obtained from TEA data files for each district and campus. When graduate tested percentages above 100 resulted in Tables 1-B through 3-B, they were reset to 100.

GLOSSARY OF 1995-96 ANALYZE CATEGORY DESCRIPTIONS

TEXAS EDUCATION AGENCY
1995-96 ANALYZE CATEGORY DESCRIPTIONS
(IN ORDER OF APPEARANCE IN TABLE 4-B)

ENROLLMENT GROUPINGS

A nine-category grouping based on the total number of students enrolled by district as of the Public Education Information Management System (PEIMS) fall collection date (late October of each year). Enrollment excludes students who are served but not enrolled by districts.

DISTRICT TYPE

Classification of school districts based on factors such as size, growth rates, and proximity to urban areas as follows:

Major Urban. The state's largest metropolitan districts serving the Houston, Dallas, San Antonio, Fort Worth, Austin, and El Paso areas.

Major Suburban. Other districts in and around the major urban areas.

Other Central City. Major districts in other large Texas cities.

Other Central City Suburban. Other districts in and around the other large, but not major, Texas cities.

Independent Town. Largest districts in counties with populations of 25,000 to 100,000.

Non-Metro: Fast Growing. Districts not fitting in any of above categories but exhibiting a five-year growth rate of at least 20 percent with at least 300 students enrolled.

Non-Metro: Stable. Districts not fitting any of above categories but with an enrollment exceeding the state median.

Rural. Districts not fitting any of above categories; districts either with an enrollment between 300 and the state median and a growth rate less than 20 percent, or with an enrollment less than 300.

PROPERTY WEALTH

Total taxable property value divided by enrollment, which indicates district ability to raise local funds on a per pupil basis. The property value used is total taxable value for the last completed calendar year—i.e., 1995, as determined by the Comptroller's Property Tax Division (CPTD). Enrollment is for the 1995-96 school year. The first wealth grouping shows ten categories; the second simply shows districts above and below state average wealth; the third is a 20-category grouping with each category representing about five percent of the state's students. The six special statutory districts without taxable property wealth form a separate group in all three wealth groupings.

TOTAL TAX EFFORT

A four-category tax effort grouping of districts defined by the total effective tax rate, which was determined by dividing the last completed calendar year's total levy amount by that year's CPTD total taxable property value. The total effective rate is the sum of the school district Maintenance and Operations (M&O) rate and the Interest and Sinking Fund standardized rate. Rates are expressed per $100 of taxable value. The six special statutory districts without property tax levies appear separately.

MAINTENANCE AND OPERATIONS EFFECTIVE TAX RATES

A four-category tax effort grouping of districts showing the M&O effective tax rate, which was determined by dividing the last completed calendar year's M&O levy amount by that year's CPTD total taxable property value. The M&O rate shown includes the local standardized rate and money generated by districts for equalizing wealth. The six special statutory districts without property tax levies appear separately.

HIGHEST PROPERTY VALUE CATEGORY

A four-category CPTD classification based on property use. Thirteen CPTD categories are aggregated into four categories as follows:

Residential. Single-family, multi-family, and residential inventory.

Land. Vacant lots and rural real (taxable).

Oil and Gas. Oil, gas, and minerals.

Business. Commercial and industrial real, commercial and industrial personal, and utilities.

A district is placed into one of the four categories above that represents its greatest total property value. The six special statutory districts without taxable property wealth form a separate group.

SMALL/SPARSE ADJUSTMENT

A four-category grouping of districts based on the small/sparse adjustment amount as a percent of the total adjusted basic allotment amount. A fifth category contains all districts receiving no small/sparse adjustment. This percentage represents the extent to which state funding is adjusted to compensate for small and/or sparsely populated districts.

COST OF EDUCATION INDEX LEVEL

A five-category grouping of districts based on the Cost of Education Index (CEI) level. It reflects geographic variations in costs and prices outside district control.

OPERATING COST PER STUDENT

A five-category grouping of districts based on operating cost per student. Operating costs are the sum of all expenditures budgeted for the operation of the district for all funds. The operating expenditures are a subset of the total expenditures; they do not include debt service, capital outlay, or ancillary services expenditures. Per student amounts are the school year expenditures divided by enrollment. The source for budgeted expenditures is the fall PEIMS submission.

EDUCATION SERVICE CENTER REGION

The state is divided into 20 geographic regions; districts within each region are served by an Education Service Center.

TAAS: PERCENT PASSING ALL TESTS TAKEN

A five-category grouping of districts based on the percent passing the Texas Assessment of Academic Skills (TAAS). For Grades 3-8 and 10, the total number of students passing all sections taken of the TAAS is expressed as a percentage of the total number of students taking one or more tests. This percentage excludes special education students and third through sixth graders taking the test in Spanish and includes only those students in the district in October of the school year, which is the percentage used for accountability purposes.

SAT I/ACT PERCENT TAKING

A three-category grouping based on the percent of 1994-95 graduates taking the SAT I and/or the ACT Assessment. A fourth category is reserved for districts that had no graduates.

SAT I/ACT PERCENT SCORING AT OR ABOVE CRITERION

A five-category grouping based on the percent of 1994-95 graduates who scored at or above the criterion (1000 on SAT I Total and/or 24 on ACT Composite) on the SAT I and/or ACT. The number of examinees meeting the criterion is divided by the number of graduates. A sixth category is reserved for districts that had no graduates.

STUDENT DENSITY

A four-category grouping based on density, or the number of students enrolled per square mile. District square miles were determined through a joint effort by the State Property Tax Board (SPTB), the Texas Education Agency, and the Texas Water Commission (TWC). Maps provided by districts to the SPTB were digitized by the TWC to determine acreage. The six special statutory districts without available mileage information form a separate group.

ENROLLMENT CHANGE FROM PRIOR YEAR

A five-category grouping based on the growth or decline in district student population over a one year period. Districts with declining enrollment represent one category, while remaining categories show one-year growth rates ranging from "0% to 3%" to "10% and over."

PERCENT AFRICAN AMERICAN, HISPANIC, AND MINORITY STUDENTS

Three six-category sets of groupings according to the ethnic composition of district student populations, as reported on PEIMS. Minority percent is calculated as the sum of all non-White populations expressed as a percentage of the total. Non-White populations include Native American or Alaskan Native; Asian or Pacific Islander; African American, not of Hispanic origin; and Hispanic.

PERCENT ECONOMICALLY DISADVANTAGED STUDENTS

A six-category grouping according to the district percentage of enrolled students classified as economically disadvantaged on PEIMS as follows:

a) Eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program;
b) From a family with annual income at/below the federal poverty line;
c) Eligible for AFDC or other public assistance;
d) Recipient of Pell Grant or comparable state need-based financial assistance program; or
e) Eligible for programs assisted under Title II of the Job Training Partnership Act.

AVERAGE TEACHER EXPERIENCE

A four-category grouping of average teacher experience years computed as the total professional experience years for all district teachers divided by the total teacher full-time-equivalent (FTE) count.

AVERAGE TEACHER SALARY

A four-category grouping by average district teacher salary computed as the total salary of teachers divided by the total teacher FTE count. Total salary amount does not include career ladder or any other supplement.

PERCENT MINORITY TEACHERS

A six-category grouping according to the minority composition of district teaching populations. Minority percent is calculated by summing all non-White teacher FTEs and dividing by the total teacher FTEs.

PERCENT TEACHERS WITH ADVANCED DEGREES

A four-category grouping by district percentage of teachers with advanced degrees computed as the FTE count of teachers with a master's or doctoral degree divided by the total teacher FTE count.

PUBLICATION ORDER FORM

Purchaser Name ______________________________ Date ____________

Send to (name, if different) ______________________________

Address ______________________________

COMPLIANCE STATEMENT

TITLE VI, CIVIL RIGHTS ACT OF 1964; THE MODIFIED COURT ORDER, CIVIL ACTION 5281, FEDERAL DISTRICT COURT, EASTERN DISTRICT OF TEXAS, TYLER DIVISION

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

(1) acceptance policies on student transfers from other school districts;

(2) operation of school bus routes or runs on a nonsegregated basis;

(3) nondiscrimination in extracurricular activities and the use of school facilities;

(4) nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;

(5) enrollment and assignment of students without discrimination on the basis of race, color, or national origin;

(6) nondiscriminatory practices relating to the use of a student's first language; and

(7) evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

TITLE VII, CIVIL RIGHTS ACT OF 1964 AS AMENDED BY THE EQUAL EMPLOYMENT OPPORTUNITY ACT OF 1972; EXECUTIVE ORDERS 11246 AND 11375; EQUAL PAY ACT OF 1964; TITLE IX, EDUCATION AMENDMENTS; REHABILITATION ACT OF 1973 AS AMENDED; 1974 AMENDMENTS TO THE WAGE-HOUR LAW EXPANDING THE AGE DISCRIMINATION IN EMPLOYMENT ACT OF 1967; VIETNAM ERA VETERANS READJUSTMENT ASSISTANCE ACT OF 1972 AS AMENDED; IMMIGRATION REFORM AND CONTROL ACT OF 1986; AMERICANS WITH DISABILITIES ACT OF 1990; AND THE CIVIL RIGHTS ACT OF 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Employment Opportunity/Affirmative Action employer.
